

ANVERA 48 – NEW SMART CARBON YACHT TENDER

Here is a new way to live the sea. Italian yacht tender builder **Anvera** has introduced its latest creation, the **Anvera 48**. This smart yacht tender is the result of a ten-year experience accrued in competitions, most notably class 1 Offshore, but also in industrial sectors with a high technology content. The elegant simplicity of its lines, combined with the wide spaces on board studied in detail to ensure functionality and versatility, give Anvera a unique liveability for its dimensions.

This craft is not only lightweight, but also exceptionally resistant and safe; it requires complex and technological design, the use of special materials and attention to the smallest details. Moreover the used materials include hardly any wood. Anvera 48 is built using unidirectional or multiaxial carbon, very thick high-density PVC, and epoxy resin. Thanks to its constructive method, Anvera is characterized by one of the best weight – power ratios as well as by a considerable reduction of installed horses.

This allows to introduce a “sustainable Anvera is its remarkable low fuel consumption. In accordance with the most modern and advanced technologies, from the automotive to the aerospace sector just to mention a few examples, Anvera is entirely built in carbon fiber. And it is thanks to carbon fiber which is possible to manufacture a one of a kind product as Anvera, in terms of lightness, strength, performance and innovative, sporty and trendy design.

Anvera 48 is comfortable and functional, with a 19 square metre aft beach area, 3.5 square metres dedicated to sunbathing and a spacious master cabin found below decks. The superyacht tender is completely customisable with myriad finishing options, and it is priced from **€690,000** as standard.
