ANVERA 48 PROJECT

A NEW ANVERA IS BEING MANUFACTURED

The construction of a new model of Anvera has begun at our shipyard in Misano Adriatico (Italy) and we are proud to announce the launch of the new Anvera 48 at the beginning of 2018, which will be available for the Summer Season 2018.

Full Carbon Shape

With Anvera 48 once again we wish to confirm our philosophy of a product entirely built in carbon, like Anvera 55.

Carbon fiber means

- .superior strength
- .lighter weight
- .bigger efficiency
- .less energy to move
- .faster speed
- .remarkable low fuel consumption
- .less waste
- .less pollution
- .less Co2 emissions
- .more respect for the environment

An eco friendly product

All the advanced technology products are in carbon: the new generation of aircrafts are in carbon, formula 1 is in carbon, high technology cars are in carbon, the wind turbines are in carbon, just to mention a few examples.

Carbon fiber

allows also to realise FORMS OF DESIGN not feasible with traditional material and Anvera is a perfect example of this with its modern and innovative trendy design.

Based on this, we are setting up a new shipyard of 2.000 square metres totally dedicated to carbon fiber molding...

...because we do manufacture OUR OWN CARBON.

The elegant simplicity of its lines, designed in accordance with functionality, combined with a notable comfortable space on board, from the huge beach area on transom to the cabin self, has resulted in a harmonious and sporty vessel come out of the pencil of Aldo Drudi with his incomparable Design.

"a new way to live the sea"

"The new Anvera 48 will be presented in world wide premiere at Versilia Yachting Rendez-Vous held in **Viareggio** (Lucca) Italy **from 10th to 13th May 2018**"
